

Resorb Networks, Inc. Releases Public Beta of BlindSpeak™, which Lets You Send Synthesized Messages to Anyone Anywhere

Resorb Networks, Inc releases a new product, BlindSpeak™ and accompanying Facebook application which allows users to send digitally synthesized messages to anyone, anywhere.

New York, NY ([PRWeb](#)) January 21, 2009 -- Resorb Networks, Inc (<http://www.resorb.net>) has released the public beta of BlindSpeak™ (<http://www.blindspeak.com>) and its accompanying Facebook Application, BlindSpeak™ for Facebook (<http://apps.facebook.com/blindspeak>).

BlindSpeak™ is a brand new service, which allows you to send digitally synthesized messages to anywhere in the world. The service gives individuals the ability to think 'outside the box' when the need arises, to send funny or informative messages to others.

These "speech-cards" offer people another way of expressing themselves to family and friends - through digitally synthesizing their text.

Originally developed as a proof-of-concept for a bigger project created by Resorb Networks, Inc. - BlindSpeak™ allows users to send synthesized messages through the web. The service has a wide arrange of uses, from sending a unique "happy birthday" message to your friend - to sending a more serious, anonymous message to someone.

In addition, the accompanying Facebook application lets users of Facebook send custom digitally synthesized messages to their friends, through the BlindSpeak™ service.

As this is only the initial beta launch of the BlindSpeak™ service, the extent of the features included is minimal. However, expect to see a wide arrange of additional features to be added within the near future, including TTY/TTD services, sending personalized (and synthesized) voice mail messages, a mobile version, a more advanced text-to-speech (TTS) engine, and more.

Resorb Networks, Inc. creates radical, never before seen applications for the web. By pushing the boundaries of the web Resorb Networks, Inc creates the ability to amaze and entertain web users throughout the world.

Resorb Networks, Inc. is best known for the company's popular MyBlackBook® service, which now has over 16,000 active users.

Resorb Networks, Inc. offers a wide arrange of services, including Custom Software Development, SaaS (Software as a Service), Web Hosting, Data Integration, Search Engine Optimization (SEO) and Dedicated Servers - amongst other products and services.
